CSS

SCSS

JavaScript

PHP

MySQL + MariaDB

Git

TypeScript

ABOUT ME

I am passionate about web design, experienced in Front-End Web with a high level in database management and an intermediate level in Back-End Web development, with proven experience at Infortisa S.L. developing and maintaining Web applications with documented and reusable code. I love to learn and develop new things, and I am always willing to face new challenges and difficulties, including learning new frameworks or structures. In general, most Front-Ends tend to follow a pattern, adopting the styles, templates and tools already established and I, in addition to that, am the one who defines all that structure, thus being able to create templates from scratch, or adapt to an already established design.

CAREER OBJECTIVE

My objective is to bring both my potential and my knowledge to a company that helps me grow both personally and professionally.

- These last two years I have been working from home, and I consider that it is the way in which I feel most motivated and in which I can best exploit my capacity, so it is what I am looking for most in a company right now.

WORK EXPERIENCE

Front-End Developer

INFORTISA S.L.

June 2018 - current / Valencia

- Desarrollo y diseño de aplicaciones Web Responsive
- Web Application maintenance
- Database management
- Creating and maintaining Ajax with PHP
- Creating and maintaining models and controllers with PHP
