Libraries and Standards

ABOUT ME

I am passionate about web design, Full Stack Web developer, high skilled Front-End experience and a nice level of database management & PHP Back-End, with proven experience at Infortisa S.L. developing and maintaining Web applications with documented and reusable code. I love to learn and develop new things, and I am always willing to face new challenges and difficulties, including learning new frameworks or structures. In general, most Front-Ends tend to follow a pattern, adopting the styles, templates and tools already established and I, in addition to that, am the one who defines all that structure, thus being able to create templates from scratch, or adapt to an already established design.

CAREER OBJECTIVE

My objective is to bring both my potential and my knowledge to a company that helps me grow both personally and professionally.

- These last three years I have been working from home in a hybrid way, and I consider that it is the way I feel most motivated and in which I can best exploit my capacity, so I would be delighted to take on a hybrid or telecommuting position.

WORK EXPERIENCE

Full Stack Developer

INFORTISA S.L.

June 2018 - current / Valencia

- Development & design of Responsive Web application
- Web Application maintenance
- Database management
- Creating and maintaining Ajax with PHP
- Creating and maintaining models and controllers with PHP
